## Invitation Letter

To Whom It May Concern,

Technische Universität Bergakademie Freiberg would like to invite one assistant professor from the Institute of Geological Sciences, the University of Wrocław for a two-week visit to our Institute of Mineralogy in order to exchange and raise the competencies of academics participating in higher education. Our common goal is to: (1) discuss a wide range of teaching paths and models applied in geological sciences, (2) share the experience of applied methods and didactic experience, and (3) seek the improvements which may be put into practice in the field of Earth Sciences in both German and Polish higher education system.

During the stay, we would like to invite the Participant to:

- take a part in our lectures and exercises as both listener and lecturer;
- extend the didactic collection of rocks and minerals samples during the common fieldwork;
- prepare and share didactic thin section samples/documentation and discuss the information obtained from the imaging by **Keyence Digital-Mikroskop**;
- use the microprobe equipment (**JEOL JXA-8230**) on the samples from the project conducted in cooperation with the Student Scientific Association of Geologists of the University of Wrocław,
- participate in a meeting with the Saxon State Office for Environment, Agriculture and Geology representatives to link education with the real need for the labor market and environmental issues.

Yours sincerely,  
Dr. Hripsime Gevorgyan
